Curriculum information subject to change

The majority of theory courses are offered online to allow our students to learn at their own pace. Students have full support from CITCM instructors and administration for their success in the program, through the estudy website, online course materials (PPTs, quizzes, assignments), lecture videos, class forums, email communications, and much more.

Practical classes are delivered onsite by our knowledgeable and experienced instructors. With the onsite class schedule is set typically at 2-3 days a week, CITCM students has a lot of flexibility to manage their time for work, family, and study outside campus.
